Chad Koslovsky

Systems administration | Dependable access, clear operations

Milliken, Colorado · chad@koslovsky.xyz

System Administrator | Strive Health

01 PROFILE

Systems engineer with datacenter, managed-services and direct client-support experience. Bring Entra ID and Microsoft 365 work, PowerShell/Python scripting and AWS IAM alongside NOC escalation, server modernization and audit operations. Build systems that can be supported, and keep technical decisions connected to the people using them.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Current

Build and operate client systems through my technical practice, from implementation to direct IT support.

Implemented Entra ID and application identity integrations, tenant-aware access boundaries and authenticated connectors; provide on-call help to clients.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Led the NOC, monitoring, recovery readiness and escalations for datacenter services; remained on call during the later period of sole systems-engineering responsibility.

Migrated workloads from Hyper-V and VMware ESXi to Docker and Kubernetes, upgraded servers and firewalls, and ran SOC 1/SOC 2 audits with supporting SOPs and evidence.

Systems / Software Engineer · Office Evolution | 2014-2015

Built shared applications connecting CRM, provisioning, onboarding and service operations across locations.

Worked with the CEO and CIO and turned cross-department handoffs into explicit workflows for the people using those systems.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered client networks, systems and endpoints as part of a managed-service provider.

Built diagnostic tooling and used remote monitoring for troubleshooting, with on-call support and direct communication with business owners and end users.

Infrastructure and Systems Focal · IBM | 2010-2012

Served as an infrastructure focal for shared enterprise environments, coordinating changes, incidents and escalations across application, vendor and business teams.

Automated audit and backup workflows and managed virtualization test labs and hosted desktop platforms.

03 SELECTED WORK

Excell Services | Servers, endpoints and branch access · Completed infrastructure work through Technomancy IT, Wray, Colorado

Excell Services needed its legacy IT refreshed and a satellite location connected. Through Technomancy IT, I replaced or rebuilt servers and employee computers, upgraded the network, and implemented VPN connectivity with Windows Server and Active Directory so corporate users could reach the network resources they needed.

Technomancy platform | Traceable delivery and recovery tooling · Own technical practice and client-support platform

Operating my client-support platform meant keeping releases and recovery understandable. I built deployment tooling that records Git-derived image identity, applies SQL migrations, and checks container health and public HTTP responses, plus a restore-verification script for a disposable PostgreSQL instance. The result is a repeatable operations workflow with concrete places to investigate a failed release or restore.

ProofMark | Identity, signing and audit history · Client engineering contribution completed; AGPL/open-source product

For ProofMark, a document-signing product, I completed a client engineering contribution connecting identity, PDF fields, routing and audit history. I designed explicit security-sensitive state and fallback paths across application, API and verification workflows. The contribution brought identity decisions and document history into one workflow, a useful perspective when partnering with a security team on access-sensitive processes.

04 CAPABILITIES

Entra ID, Microsoft 365 & AWS IAM · Linux & Windows Server · PowerShell & Python automation · Monitoring, escalation & recovery · Technical documentation & audit operations
